DeckLink RT
## Hidden Fastener for Removable Timber Tiles

DeckLink RT is for securing timber tiles in building raised decks supported on Elmich pedestals.

DeckLink RT is for building timber tile decks with hidden fixings. It allows individual deck tiles to be removed and/or replaced for maintenance and access to services beneath the deck without removing and potentially damaging several tiles.
DeckLink RT is a diamond shaped fastener that holds the deck tiles in place utilising the slots in the sides, with a screw that attaches to the tile spacer for fixing the DeckLink RT to a pedestal.

DeckLink RT is designed for gaps between the deck tiles of either 5 or 6 mm wide, which matches the gaps between the individual boards in the deck tiles.
DeckLink RT Fastening Disc slides in 2 directions to secure or release the tiles by pushing against the posts at the ends of the fastener through the gap between the tiles after slightly loosening the screw.
Installation

Step 1
Loosen screw and slide Fastening Disc to one side.

Step 2
Place tiles on side away from Fastening Disc.

Step 3
Insert remaining tiles. Slide Fastening Disc, aligning its centre with the centre of an Elmich pedestal. Tighten screw.

Enhancing the Urban Experience

The Elmich security hologram
ensures authenticity of the products.
